

## Your Cu-Sil® Partial Denture

**Cu-Sil® partial dentures** are designed to give you long-lasting soft, cushioning effect to help preserve your natural teeth. It is extremely important that this premium partial denture be properly cared for.

**Cu-Sil® denture cleanser** is a moderate strength, non-chlorine product which will not cause bleaching, hardening, or porosity of this soft, elastomeric material. It should be used daily to preserve and protect your Cu-Sil® denture.

This **Cu-Sil® cleanser** is also effective as a detergent to iron stains and deposits from hard water. For heavier stains from coffee, tea or nicotine, **Kleenite®** may be safely used. In the event that heavy calculus or tartar accumulates due to irregular daily cleaning, **Stain Away Plus®** is also recommended.

*In clinical tests by the Mayo Clinic, **Cu-Sil® Cleanser** was found effective in preventing the invasion of black *Candida* fungus, while preserving the usefulness of soft Cu-Sil® linings. Use only cleaners recommended by the maker of your Cu-Sil® partial denture.*

## Care and Cleaning

It is only necessary to soak your Cu-Sil® partial denture for 1-2 hours in **Cu-Sil® Denture Cleanser**, but overnight if desired. Rinse thoroughly before inserting denture. **Cu-Sil® Denture Cleanser** is ideal for preserving and protecting Cu-Sil® soft linings. Popular denture tablets will cause bleaching and other forms of deterioration and must not be used if you want to prolong the life of your Cu-Sil® partial denture.

As with natural teeth, tartar and other deposits may develop over a period of time. **Kleenite®** will remove stains and plaque while occasional use of **Stain Away Plus®** will remove hardened calculus and tartar. If your denture is damaged, does not fit properly, or your mouth tissues become irritated, see your dentist.
